Summary

Backend Developer specialized in **Laravel** with real production experience building **secure, scalable REST APIs** and backend-heavy systems (dashboards, workflows, multi-role apps). Strong focus on clean architecture, authentication/authorization, database design, and solving business-critical issues in live environments.

Core Skills

Laravel: REST API design, Request Validation, Policies, Service Layer, Jobs/Queues (basic), Sanctum, JWT, Role-Based Access Control (RBAC)

MySQL: relational modeling, indexing, query optimization, transactions

API Design & Security: auth flows, rate limiting, input sanitization, error handling, logging

Tools: Postman, Git/GitHub, cPanel • **Docker:** basic usage (if needed)

Experience

Backend Developer — Roaa (Apr 2025 – Present)

Worked on real production backend systems with a focus on APIs, dashboards, and business logic.

- Designed and maintained REST APIs consumed by web/admin dashboards (and partial mobile integrations).
- Implemented authentication using **JWT** and **Laravel Sanctum**, and enforced authorization using RBAC.
- Built complex workflows (approvals, notifications, booking/availability logic) beyond CRUD.
- Improved database performance through better relations, indexes, and query tuning.
- Debugged production issues and delivered stable fixes with clean, maintainable code.

Freelance Backend Developer (~4 months)

- Delivered Laravel API modules, authentication, and database schemas for small/medium projects.
- Built and tested Postman collections, standardized responses, and improved error handling.
- Handled bug fixing and API issues under tight timelines.

Selected Projects (Backend Focus)

Note: Some projects are demo versions inspired by real production systems.

Eyady Platform (Medical System) — Production-scale APIs

Multi-role system supporting Doctors, Clinics, Patients, Labs & Owners. Modules include appointments, inventory with real-time stock deduction/alerts, financial ledger, approvals & notifications.

Tech: Laravel, MySQL, REST APIs, Sanctum, JWT, RBAC

Masif (Tourism & Booking Platform) — Booking Engine + Dashboards

Backend APIs for booking logic, availability management, and dashboard data aggregation; partial mobile API integration.

Tech: Laravel, MySQL, REST APIs

Luk System (E-commerce + Electronic Lottery)

Implemented business rules, transactions handling, roles/permissions, and secure API endpoints for commerce and lottery workflows.

Tech: Laravel, MySQL, REST APIs, RBAC

Blog Platform (Personal)

Authentication, role management, comments system.

Tech: Laravel, MySQL, Bootstrap — [GitHub Repo](#)

Hotel Management System (Personal)

Room booking, admin dashboard, service management.

Tech: Laravel, MySQL, React — [GitHub Repo](#)

E-Commerce Platform (Personal)

Products, cart, orders, payment gateway integration.

Tech: Laravel, MySQL, React — [GitHub Repo](#)

Education

B.Sc. in Mathematics & Computer Science — Zagazig University (Expected 2026)

Certifications

- Full Stack Developer Course — Coder Company
- PHP & MySQL Course — Udemy

Languages

Arabic (Native) • English (Intermediate) • French (Basic)
